CLIPSTACK / DESKTOP APP

Your clipboard, remembered.

A visual setup and quick-start guide for macOS and Windows.

ClipStack clipboard history · product artwork

Choose your computer

01 / MAC

Start with macOS

Install the DMG, grant optional paste access, and learn the Mac shortcuts.

OPEN MAC GUIDE →

02 / WINDOWS

Start with Windows

Install the EXE, open the history window, and choose a shortcut.

OPEN WINDOWS GUIDE →

ClipStack keeps a searchable history of copied text and images on your device. Select an item to copy it again, then paste normally in your app.

Choose a section above or use the PDF outline/bookmarks panel to jump directly to Mac or Windows.

01 / MACOS 14+ · APPLE SILICON

Set up ClipStack on Mac

Download the DMG, move the app to Applications, then open your history with the Mac shortcut.

Install

01 **Download the Mac build.** Get ClipStack.dmg from the latest public release.

02 **Install the app.** Open the DMG and drag ClipStack onto the Applications folder.

03 **Open ClipStack.** On first launch, macOS may block this unsigned app. In System Settings → Privacy & Security, choose Open Anyway, then launch ClipStack again.

04 **Allow automatic paste (optional).** When prompted, enable ClipStack under System Settings → Privacy & Security → Accessibility. Without it, selecting an item copies it and you paste with ⌘V yourself.

Mac app preview

Illustrative Mac product preview; controls and sample clipboard entries are shown for orientation.

Find a copy and paste it

Open the floating history panel, search or filter, select a result, then paste in the destination app.

COPY → SEARCH → SELECT → ■V

Keyboard shortcuts

Shortcut	Action
■ + ■ + V	Open history (default).
■ + ■ + V · ■ + ■ + V · ■ + ■ + V · ■ + V	Alternative history shortcuts in Settings.
■ + V	Paste the selected item in the destination app.

The panel can also filter by item type and pin favourites. Pinned items are retained separately when you clear unpinned history.

Mac privacy & help

History stays on this Mac in ~/Library/Application Support/ClipStack/. ClipStack does not upload clipboard content. If the shortcut is already used by another app, choose a different preset in Settings. For the latest Mac installer, use the public release page.

Set up ClipStack on Windows

Install for your Windows account, launch from Start, and open the history panel with your shortcut.

Install

01 **Download the Windows installer.** Get ClipStack-Setup.exe from the latest public release.

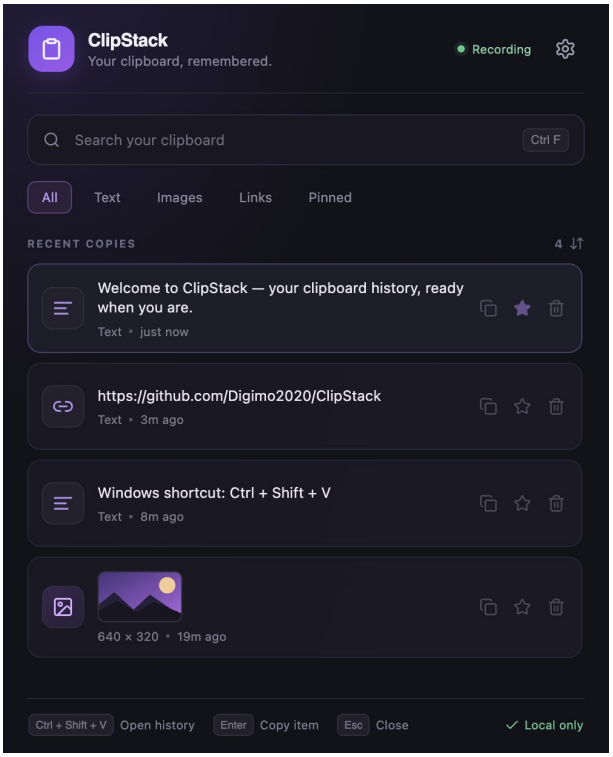

02 **Run the installer.** It installs for your account without administrator access. Choose another folder in the installer if you prefer.

03 **Confirm the first-run prompt.** The app is unsigned; Windows SmartScreen may ask you to review and confirm before opening it.

04 **Start ClipStack.** Open it from the Start menu. The app stays in the notification area by the clock; check the hidden-icons arrow if you do not see it.

Open history

Press **Ctrl + Shift + V** to show the panel. Search or choose a content tab, select an item to copy it, then press **Ctrl + V** in the destination app.

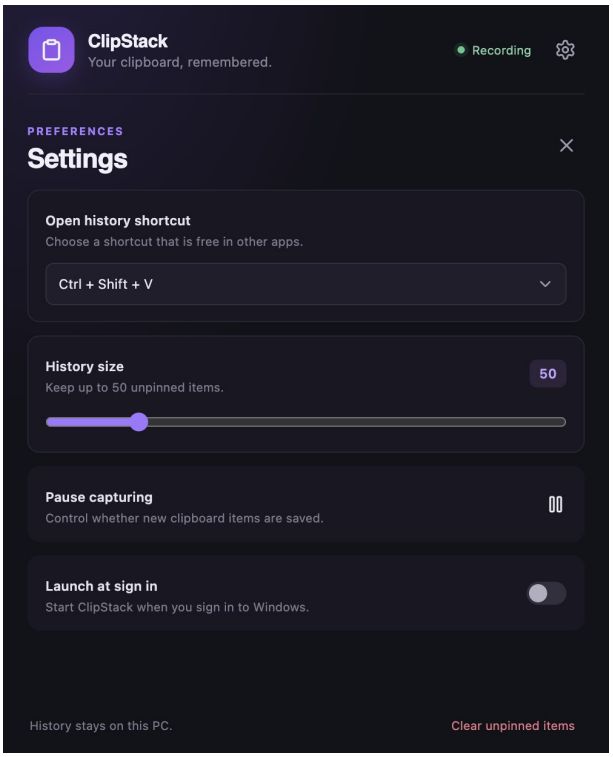

Windows history window · genuine app screenshot with sample content.

Inside the history window

Control	What it does
Search and type filters	Narrow the history by phrase or content type.
Select an item	Copy it; paste with Ctrl + V in another app.
Pin / delete	Keep favourites or remove an entry.

Pick your shortcut and preferences

Open Settings from the gear icon in the history panel. Changes are stored locally.

Windows Settings window · genuine app screenshot with sample values.

Available history shortcuts

Shortcut	Use
Ctrl + Shift + V	Default shortcut.
Ctrl + Alt + V	Alternative if another app uses the default.
Alt + V	Another available alternative.
Ctrl + V	Paste in the active app; ClipStack leaves it available.

Windows keeps Win + V for its own clipboard history. ClipStack uses a separate shortcut.

Useful settings

Set the unpinned history limit (20–200), pause capture, clear unpinned items, or enable Launch at sign-in. ClipStack stays in the notification area when its window is closed.

Windows storage & troubleshooting

History is stored in %APPDATA%\ClipStack\ as a JSON history file with separate image files. Nothing is uploaded. If a shortcut does not work, another app may have claimed it: open Settings and select another combination. If you cannot see the tray icon, open the hidden-icons arrow beside the clock.
